

the perfect partner

STOCK CUBE™

PRESS RELEASE

New Product - The RITCHIE Stock Cube™

The innovative Ritchie Stock Cube™ handling system substantially benefits farm health and safety for animal and operator.

Self contained and moveable from site to site, the Stock Cube unfolds to provide a freestanding stock pen with a curved sweep area within the cube and a secondary gate for the handler to work safely behind the penned stock.

The 3.2 m x 2.5 m cube unfolds to a size of 3.2 m x 5.5 m and is designed to handle stock of various sizes and weights. The unit has no corner traps allowing curious stock to move freely through the curved sheeted pen.

Fast exit operator side gates enable a single operator to manage the system whilst easily accessing a secured animal within the penned area.

Twenty x 2.5 m hurdles can be stored and transported within the cube with the whole unit designed to be loaded and handled by forklift to ease site set-up.

Working in conjunction with either a fixed or mobile cattle crush, the Stock Cube provides a safe, adaptable add-on to upgrade existing farm units or as a stand-alone system.
